

DIT - Digital Writing Solution Handwriting Interpretation Service

OVERVIEW

Data collection is a challenge faced by many businesses today. Capturing data naturally, through handwriting, is often the most convenient and cost-effective way. Whether information is captured using a digital writing solution or through a Tablet PC stylus (digital ink), the handwriting is needed somewhere in a downstream process. Sometimes it's simply an image of the completed document and at other times it's the data from the document that is required. In order for the handwriting to become useable data, it must run through an interpretation process.

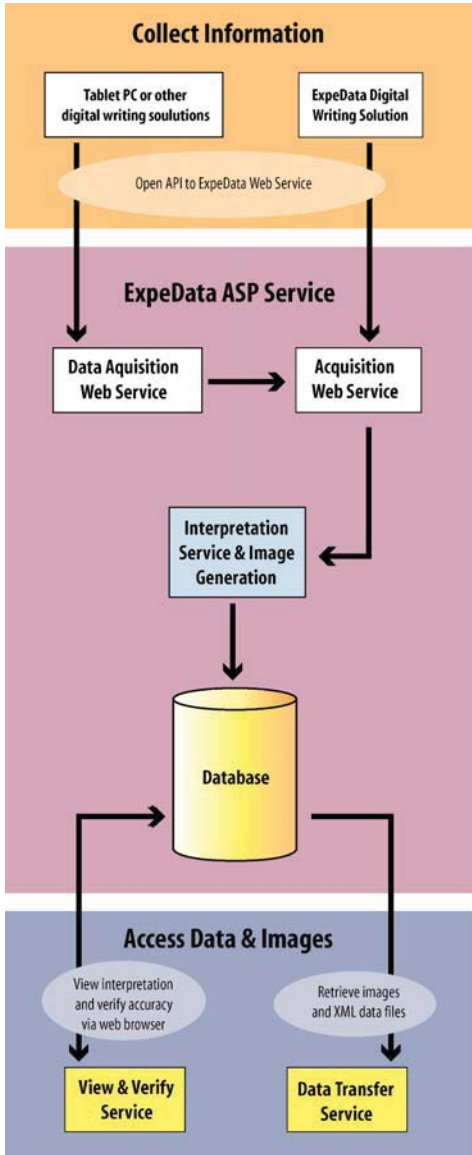

The DIT handwriting interpretation service not only allows for interpretation of data originated from the DIT digital writing solution, and can process handwriting from third-party digital writing solutions or digital ink from Tablet PC-based solutions.

THE DIT DIFFERENCE

The DIT solution uses multiple intelligent handwriting engines to achieve the highest possible accuracy to convert handwritten text into digital characters. Each engine possesses particular strengths in interpreting certain data field types.

HANDWRITING INTERPRETATION SERVICE

For the highest accuracy level of interpretation, we offer Human Handwriting Verification Services. This secure, solution leverages personnel reviewing the interpretation after being processed through the automated engines and either confirming or correcting the information. The corrected data is automatically updated in our database and ready to be routed anywhere in an .xml format.

FLEXIBLE OUTPUT OPTIONS

When using the DIT handwriting interpretation service, there are many alternatives for receiving images and data. Our package includes the following options:

- Interpretation
- Access to on-line images
- Access to on-line verification (i.e. viewing converted handwriting into digital text and changing or approving)
- TIF level 4 Images in black & white or full-color
- Standard .xml output for easy routing into downstream systems
- Access to the Human Handwriting Verification Service

IMAGE AND DATA OPTIONS:

Our standard output for images is a TIF level 4 image. Formats such as JPEG and GIF are available upon request.

Our standard output is .xml. Formats such as customized .xml or ASCII text can be generated upon request.

Building in special delivery alternatives and business rules for things like API's, Remote Procedure Call (RPC), custom workflow, emailing, etc. can be customized upon request and for an additional fee.
